## Social and economic conditions

#### **Education**

The proportion of people in the Waratah Wynyard LGA who have completed Year 12 and above is less than the proportion for Tasmania overall.

PER CENT OF ELIGIBLE POPULATION WHO HAVE COMPLETED YEAR 12 AND ABOVE

Higher education levels are associated with better health outcomes.

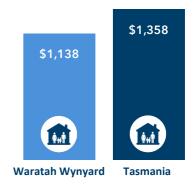

#### **Unemployment rates**

The rate of people in the Waratah Wynyard LGA who are unemployed is lower than the rate in Tasmania overall.

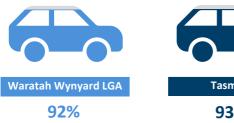

#### Median weekly income

Weekly income per household is less in the Waratah Wynyard LGA than in the rest of Tasmania.

#### **Motor vehicles**

Ninety two per cent (92%) of households in the Waratah Wynyard LGA have one or more motor vehicles.

#### Home ownership

More people in the Waratah Wynyard LGA own their homes outright, compared to the rest of Tasmania.

	Waratah Wynyard	Tasmania
Owned outright	41%	37%
Owned with mortgage	31%	33%
Rented	24%	26%

## **Healthy living**

#### Self-reported health

Thirty-four per cent (34%) of Waratah Wynyard LGA residents rated their health as "excellent" or "very good". This is lower than the rate for Tasmania.

#### ADULTS REPORTING THEIR OWN HEALTH AS 'EXCELLENT' OR 'VERY GOOD'

How people feel about their own health, their state of mind and their life in general is a common measure of health. (Australia's Health 2018. AIHW)

#### **Risk factors**

Risk factors are conditions or behaviours that make it more likely people will get a chronic condition or health problem.

		Waratah Wynyard	Tasmania
•	Overweight/obese body mass index (BMI)	73%	62%
9	Current smoker	16%	15%
	Daily/occasional vaping	2%	3%
	Single occasion risky drinking (>4 alcoholic standard drinks)*	37%	37%
<b>汶</b>	Insufficient moderate/vigorous activity <sup>+</sup>	18%	24%
	Did not meet recommended daily vegetable intake <sup>^</sup>	90%	91%
ď	Did not meet recommended daily fruit intake <sup>^</sup>	60%	61%

In the Waratah Wynyard LGA, around 16% of people aged 18 years and over, are daily and current smokers, which is lower than the rate for Tasmania.

## **Healthy living**

#### **Psychological distress**

More adults in the Waratah Wynyard LGA are likely to experience high or very high levels of psychological distress compared with Tasmania overall.

#### PEOPLE WITH HIGH OR VERY HIGH LEVELS OF PSYCHOLOGICAL DISTRESS

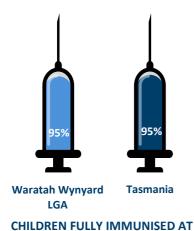

Psychological distress is a term used to describe unpleasant feelings or emotions that can influence how we function in daily life.

### Health care

#### **Immunisations**

Ninety-five per cent (95%) of children in the Waratah Wynyard LGA are fully immunised by the age of five, which is similar to the rate for Tasmania.

**5 YEARS OF AGE** 

## **GP** and emergency department encounters

Eighty-four percent (84%) of people from the Waratah Wynyard LGA saw a general practitioner for their own health in the past twelve months\*.

On average each year during 2021-2023, 2,631 individuals from the Waratah Wynyard LGA visited an ED (179 people per 1,000 population^), with an average of 5,999 presentations per year (408 ED presentations per 1,000 population^).

^Estimated population for June 2022 =14,689

Sources: Psychological distress and GP encounters: Tasmanian Population Health Survey LGA Supplementary Data Tables 2022. Immunisations: Primary Health Information Development Unit, Social Health Atlas of Australia: Local Government Areas; Compiled based on data provided by Australian Childhood Immunisation Register, Medicare Australia, 2021.

Emergency department encounters: Department of Health and Human Services, Health Central Data Warehouse, Tasmania. Analysed by Primary Health Tasmania; accessed March 2025.

\*Individual totals may be higher due to patients potentially visiting more than one practice outside an LGA area or possible de-identification linkage errors from patient administration extraction software.

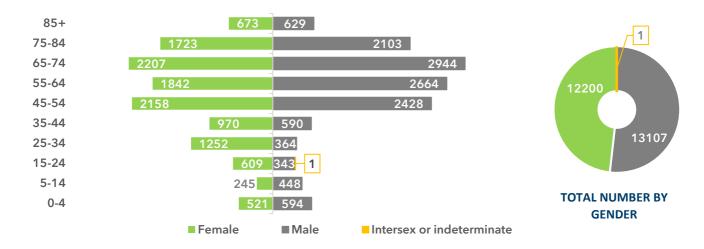

## **Health outcomes**

## **Public hospital admissions**

During the five years from 2019-20 to 2023-24 there were 25,308 admissions to Tasmanian public hospitals from the Waratah Wynyard LGA area, with 11,403 overnight stays.

#### NUMBER OF PUBLIC HOSPITAL ADMISSIONS BY AGE GROUP AND GENDER 2018-19 TO 2022-23

TOP 10 PRIMARY HOSPITAL DIAGNOSIS*^	TOP 10 CHARLSON COMORBIDITIES^^	TOP 10 POTENTIALLY PREVENTABLE HOSPITALISATIONS	
Care involving dialysis	Renal disease	Chronic obstructive pulmonary disease	
Other cataract	Any malignancy, including lymphoma and leukaemia, except malignant neoplasm of skin	Congestive heart failure	
Other symptoms and signs involving the digestive system and abdomen	Chronic pulmonary disease	Cellulitis	
Liveborn infants according to place of birth	Myocardial infarction	Urinary tract infections	
Single spontaneous delivery	Cerebrovascular disease	Dental conditions	
Abdominal and pelvic pain	Congestive heart failure	Diabetes complications	
Acute myocardial infarction	Metastatic tumour	Iron deficiency anaemia	
Other diseases of digestive system	Diabetes with chronic complication	Type 2 diabetes	
Pain in throat and chest	Diabetes without chronic complication	Convulsions epilepsy	
Other malignant neoplasms of skin	Dementia	Angina	

<sup>\*</sup>Excludes diagnoses coded as "persons encountering health services in other circumstances" and "other medical care" which cover a wide range of diverse categories and are as such less useful in understanding reasons for hospitalisations.

## **Health outcomes**

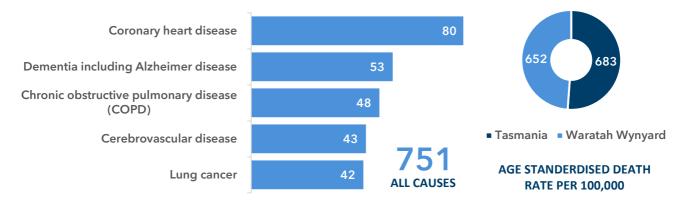

The primary hospital diagnosis is the diagnosis established after study (for example, at the completion of the episode of care) to be chiefly responsible for causing the episode of admitted patient care. It is essentially the main reason someone needed to be admitted to hospital.

^^Patients admitted to hospital often have other comorbid conditions, which may or may not be related to their diagnosis. *The Charlson Comorbidities Index* classifies 17 comorbid conditions which may influence mortality risk.

#### Causes of death

During 2018-2022 coronary heart disease (10.7%), dementia including Alzheimer disease (7%), chronic obstructive pulmonary disease (6.4%), cerebrovascular disease (5.7%) and lung cancer (5.6%), were the leading causes of the 751 deaths in the Waratah Wynyard LGA area. The age standardised death rate in 2022 was 652 per 100,000 compared with the overall age standardised rate of 683 for Tasmania.
