Thursday 31 July

1-2pm

The Statewide Mental Health Services (SMHS) multidisciplinary Grand Rounds, held in collaboration with the Centre for Mental Health Innovation and the Statewide Mental Health Services Education and Practice Development Unit, are open to all health professionals with an interest in mental health.

GP CLINICAL EDUCATION Kidney disease in Tasmania

Webinar

Tuesday 22 July

Chronic kidney disease (CKD) is on the rise in Tasmania. In 2020, nearly 38,000 Tasmanians were diagnosed with CKD, a disease that affects women more commonly than men. Recent data highlights a concerning 30% increase in kidney disease cases across the state over the past decade. However, this overall trend masks a far more alarming 88% surge in the North-Western regions. Burnie and Devonport alone saw a dramatic rise of 75% or more between 2010 and 2020, while some areas in the South saw little to no change. Although kidney disease is manageable when detected early, the rate of urine testing remains inconsistent and significantly below recommended levels. Those who missed out on urine testing faced much worse health outcomes compared to those with near-normal results.

Join us to learn about the latest findings from the University of Tasmania's CKD TASlink study, along with effective detection and management strategies for kidney disease.

GP CLINICAL EDUCATION

Cardiology at the interface of primary and secondary care – session three

Webinar

Wednesday 23 July

RACGP approved activity 1.5 hours (educational activity)

6.30-8pm

As part of the Cardiology at the Interface of Primary and Secondary Care webinar series, this 90-minute interactive session will focus on the role of general practitioners in the management of heart failure, a common condition with high morbidity and hospital readmission rate. There is strong evidence that comprehensive multidisciplinary care with GPs as the central cog improve heart failure outcomes. This session will provide a practical overview to the identification and diagnosis of heart failure in the primary care setting, strategies to achieve optimal guideline directed therapy, tips for interpreting an echocardiogram, and recognising when specialist referral is appropriate.

There is no cost for participation in these events, thanks to funding from the Australian Government under the Primary Health Networks program
